Supplier

Dedicated Internet Line

A fully uncontended service ensures your office receives a private line so you never share the bandwidth with any other internet users. This allows you to plan the performance of your applications and projects with confidence.

Ultra-Low Latency

Critical for financial trading applications, VoIP, user experience and seamless transactions.

Up to 10Gb/s Connectivity

Connectivity between 1000Mb/s to 10Gb/s to match your exact business requirements and as you no longer share resources with anyone else.

Symmetric Download and Upload Speeds

Meaning your download and upload speeds are always the same. Essential for uploading to the cloud, web hosting, streaming, sharing large data files and using VoIP.

Unlimited Usage

Meaning exactly that, there is no fair usage policy and you can use as much data as necessary.

Scalable Bandwidth

Change your bandwidth to suit your seasonal business demands and control your costs by only paying for the bandwidth you need.

“The leased line solution provided by CWCS Managed Hosting was the correct decision for us, it complements our existing connectivity framework and was by far the most cost effective way of implementing an uncontended Gb fibre line linking both sites. Backed by an SLA and around the clock support, this has proven to be the perfect solution.”
